Monthly Report, November 1973

Contract Number: NAS 9-13303

Quantitative Determination of Stratospheric Aerosol Characteristics

Since it was learned that data from SL-4 will be slow in coming and the SL-3 acquisitions were less than satisfactory, the level of effort has been restricted during this extended period of data non-availability. Progress was limited to development of processing software. It is anticipated that beginning in January, 1974 (assuming the receipt of SL-3 data tapes in late December) data analysis procedures will begin on the first acquisitions. We expect to be able to devote more time on data analysis in the near future than was originally planned, permitted by the present low profile with respect to the contract.
